

# Press Release

Austin, Texas -- March. 10, 2008.

*ENTERGY selects KAHTEC for vehicle safety device.*

## Low cost safety device reduces the chance of rear end collisions.

Entergy - Louisiana selects **Blinking Smart Stop** from KAH Technologies, (KAHTEC) for brake lights safety device.

Entergy Corporation is an integrated energy company engaged primarily in electric power production and retail distribution operations. Entergy owns and operates power plants with approximately 30,000 megawatts of electric generating capacity, and it is the second-largest nuclear generator in the United States. Entergy delivers electricity to 2.7 million utility customers in Arkansas, Louisiana, Mississippi and Texas. Entergy has annual revenues of more than \$10 billion and approximately 14,000 employees

Blinking Smart Stop lets you maximize your Brake Light Effectiveness with The Smart Stop Module. This compact State-of-the-Art solid-state electronic module converts your ordinary center brake light into an attention getting visual aid alerting device, creating a conspicuous and visual alert when you are braking. With The Smart Stop installed, when you apply your brakes, it causes your center high mounted brake light to automatically emit a visual alerting signal of 6 light flashes, followed by steady on red light condition.

**Spokesperson Bruce Brown Entergy Meter Services ECSI** said "We believe that adding the smart stop to our vehicles will help reduce the number of rear end collisions. It's a cost effective solution. When our trucks are in the repair shops as a result of accidents, it's costing our company money. Anything we can do to raise visibility of our vehicles is a good thing. The product installs in no time at all. We were happy with the tests we carried out."

Studies carried out by Daimler Benz prove that people's reaction time is quicker with flashing brake lights than without. The studies found that at a speed of 50 mph the increased reaction time reduces the stopping distance by approximately 14.5 feet, and at 65 mph by around 20 feet.

KAHTEC, Is a leading provider of cost effective vehicle safety devices that are highly reliable, user-installable such as the braking safety device **Blinking Smart Stop**.

About KAH Technologies

Based in Austin Texas. KAHTEC. sells vehicle safety technology devices, for under \$21.00 and can be ordered online at [www.kahtec.com](http://www.kahtec.com) KAHTEC has seen sales double in 12 months, with ease of installation and cost effective technology is why we have seen a rise in sales, Dean Miner – Head of Engineering said.

KAHTEC products promote driver and rider safety through its line of Blinking Smart, Be Seen - Be Safe solutions that address's person and vehicle safety concerns.
