Blinking Smart One Touch Smart Lane Changer

If YOU are that person who does not use their indicators at all ... OR who blinks them once and proceeds when changing lanes or exiting an intersection, then THIS is the product for YOU.

By simply touching your indicator switch up or down ONCE, the Blinking Smart Lane Changer will flash the indicator lights an additional 6 times. No more holding and keeping your fingers on your turn switch when changing lanes. Did you know that failure to use your indicators when turning or changing lanes is a ticketing offense?

Emergency vehicles use flashing lights at all times because it gets attention from other road users. So why not use Blinking Smart products to grab the attention of following drivers, and reduce your risk of being hit in a rear-end collision?

Blinking Smart Stop Third Brake Light Flasher

Third Brake Light Flasher lets you maximize your Brake Light Effectiveness. This compact State-of-the-Art solid-state electronic module converts your ordinary center brake light into an attention getting visual aid alerting device when you are braking.

With the Blinking Smart Stop installed, when you apply your brakes, it causes your center high mounted third brake light to automatically emit a visual alerting signal by flashing the light approximately 5 times before entering the steady-state on red light condition.

In recent years over 2.5 million rear-end collisions a year occurred, causing more than 2,149 deaths in one year. NHSTA stated in 2001 that an extra second of warning time could prevent 90% of all rear collisions, averting 2.25 million rear end crashes.

Are you Blinking Smart yet !

Blinking Smart Eye Backup Warning System

Blinking Smart Eye reversing sensors alert the driver to unseen objects behind their vehicles; children, toys, posts, bicycles, pets and other vehicles when moving backwards. Blinking Smart Eye only works when the driver engages reverse gear and will only alert the driver if there is anything behind the vehicle.

The cost of the Kahtec Smart Eye is well worth the piece of mind it offers. It uses a simple yet effective three Audio signal zone warning which means that you don't have to look at any dashboard read out. You can hear it when you are looking behind you--as you should when you're reversing.

Blinking Smart Eye is available with 2, 3, or 4 sensors in either the standard Drill-Hole type style or the special Stick-On type style.
