

Press Release

Austin, Texas -- March. 21, 2011.

TLC Van Upfitters selects KAHTEC for vehicle safety device.

Low cost safety device reduces the chance of rear end collisions.

TLC Van/Pickup Upfitters – North Carolina selects **Blinking Smart Stop** from Kahtec Technologies International , (KAHTEC) for brake lights safety device.

TLC Van/Pickup Upfitters - A division of Can-US Marketing LLC. located in Charlotte, North Carolina. Who specialize in work van and truck upfitting for commercial vehicles. TLC Van/Pickup Upfitters customers (large and small) equip their vehicles with storage, safety, and ergonomic up fits. The overall goal is efficiency for the company and their employees. With over 30 years experience in the industry, working in all segments of the fleet business. TLC Van/Pickup Upfitters provides it's customers with the best solutions and supplies to meet and exceed their requirements.

Blinking Smart Stop lets you maximize your Brake Light Effectiveness with The Smart Stop Module. This compact State-of-the-Art solid-state electronic module converts your ordinary center brake light into an attention getting visual aid alerting device, creating a conspicuous and visual alert when you are braking. With The Smart Stop installed, when you apply your brakes, it causes your center high mounted brake light to automatically emit a visual alerting signal of 6 light flashes, followed by steady on red light condition.

TLC Van/Pickup Upfitters Spokesperson Murray Coulter said “We believe that adding the blinking smart stop to our customer vehicles will add another dimension of safety and help reduce the number of potential rear end collisions. It’s a cost effective solution. When trucks are off the road as a result of accidents, it’s costing money. Anything we can do to raise visibility of customer vehicles is a good thing. The product installs in no time at all. We were happy with the tests we carried out and the quality of the product.

Studies carried out by Daimler Benz prove that people’s reaction time is quicker with flashing brake lights than without. The studies found that at a speed of 50 mph the increased reaction time reduces the stopping distance by approximately 14.5 feet, and at 65 mph by around 20 feet.

KAHTEC, Is a leading provider of cost effective vehicle safety devices that are highly reliable, user-installable such as the braking safety device **Blinking Smart Stop**.
