

Press Release

Austin, Texas -- March. 29,2008.

KAHTEC opens Sales and Distribution office in Europe for more expedient service for Rear End Collision Avoidance System.

Flashing brake lights reduces the chance of rear end collisions.

Due to the high demand for KAH Technologies (KAHTEC) flashing brake lights safety devices, (KAHTEC) now selling into Europe through the new UK sales and distribution office located in Oxford, England. This will enable euro customers to place and obtain **Blinking Smart Stop** units in a matter of days.

Blinking Smart Stop lets you maximize your Brake Light Effectiveness with the **Blinking Smart Stop** module. This compact State-of-the-Art solid-state electronic module converts your ordinary center brake light into an attention getting visual aid alerting device, creating a conspicuous and visual alert when you are braking. With The Smart Stop installed, when you apply your brakes, it causes your center high mounted brake light to automatically emit a visual alerting signal of 6 light flashes, followed by steady on red light condition.

Nicholas Cook, KAHTEC UK General Manager said “ The range of Blinking Smart Be Seen – Be Safe products have been sold successfully around the world for a number of years but now we want to make it more accessible to the people of Europe, the product is being marketed through our UK Web Site www.flashingbrakelights.co.uk the reason for this is when people search for a flashing brake light module they would prefer to buy in Europe, we want them to find us easily. There have been many concerns ordering from internet companies in the USA .Typical questions What’s the delivery time? How long does it take to arrive? Do I have to pay in dollars? Etc. We will hold stock of the various units in the UK to enable us to serve all new customers throughout Europe. “

Studies carried out by Daimler Benz prove that people’s reaction time is quicker with flashing brake lights than without. The studies found that at a speed of 50 mph (80.5 kph) the increased reaction time reduces the stopping distance by approximately 14.5 feet (4.2m), and at 65 mph (105 kph) by around 20 feet (6.2 Metre's)

KAHTEC, Is a leading provider of cost effective vehicle safety devices that are highly reliable, user-installable such as the flashing brake light safety device **Blinking Smart Stop**.
